### Report of an Event

❖ **Title of Event:** Two Days Workshop on “Internet of Things (IOT)”

**Date:** 11/09/2018 TO 12/09/2018

**Time:** 10.30am 1.30pm

❖ **Name of Organizer:** Department of Computer Engineering

❖ **Name of Speaker:** Madhu Parvathaneni

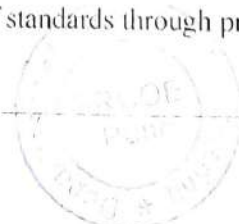

Archana Rao  
Surya Kumar  
HariBabuVanga  
Latha Kiran  
Nikhil Birage

❖ **Objective of Event:** The internet of things (IoT) describe the billions of connected device that exist in an increasingly networked society ,pervading homes ,workplaces industries and cities .the opportunities afforded by this technology are huge ,connecting humans to their environments and allowing analysis of the world at new level of detail. Whilst these opportunities are significant, they are accompanied by risk to society and its infrastructure

➤ This Workshop covered the topics of technology, security, business and economics, and social science, ethical, legal and global issues.

➤ **Detailed Summary-** Cyber attacks on IoT devices are inevitable and their silence of devices and networks must be carefully considered. Segregation of valuable network assets may be the best way to protect them from attacks.

- The legacy of devices is important when they are placed in to environments for long periods. They must be resilient in terms of security, power supplies ,software and hardware, but also remain inter operable with IoT devices of the future. Devices should be secure by default
- Society needs to reconsider legislation and regulation in a networked society to take account of the data generated by IoT devices and the power it gives to those that possess it. More transparency of who collects data and what it is used for should be provided to device users.
- Owners of IoT devices, the networks they are hosted on and the data they generate need to be accountable when problems occur, especially as artificial intelligence and machine learning becomes more common place.
- Device users should understand the choice they make when they consent to providing their data to service providers. Consent in this context should be reviewed, and awareness of the key issues promote.
- Industry is likely to drive for standards in the IoT faster than government can legislate. The public sector may drive the creation and adoption of standards through procurement policies.

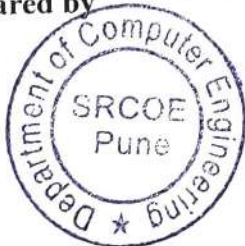

- **Technology: the basis of the Internet of Thing**
  - Device Operation
  - Powering IoT Device
  - Safety Device
  - Data Flow
- **Business and economic issue concerning the IoT :**
  - The IoT Industry
  - Responsibility and transparency
  - Investment in the IoT
- **Security : protecting our Interconnected world**
  - Device and Network resilience
  - Cyber security and the IoT
