Ban on Use of Plastic

"Elimination of Single Use Plastic" and effects of plastic on environment and all living beings. With a significant jump in the production and consumption of plastics, waste generation in India is likely to triple by 2030 from 62 million tonnes per year to 165 million tonnes. The government has banned the manufacture and use of single-use plastics but has not been able to enforce them properly. Disposal of plastic waste is a grave concern due to improper collection and segregation. Considering its harmful effects, the institute has initiated the awareness in college campus by publishing the charts and notifications. Just to reduce the use of single-use plastics and get into the habit of recycling more often.

Following notifications are displayed on each notice board for the minimization of plastic use.
